

One link from seller intent to onchain settlement.

Seller-created checkout links. Buyer-owned authorization.
Official x402 settlement on Algorand Testnet.

agentpay-firewall.vercel.app

A fixed endpoint proves the protocol. It does not create a usable payment product.

The missing product layer

- | | | |
|----|-------------------------|---|
| 01 | Seller control | Amount and recipient must be set per payment, not per deployment. |
| 02 | Buyer clarity | The buyer must see exact terms before opening a wallet. |
| 03 | Verifiable proof | The 402 challenge and final receipt must match those terms. |

The product has two users and one shared source of truth.

Seller intent becomes a signed checkout; the buyer approves only after the x402 challenge matches it.

No private keys enter AgentPay. The buyer signs in Pera Wallet; GoPlausible verifies and settles.

The seller controls every payment without touching server config.

Set a title, exact USDC amount, receiving address, and context. One click creates a 7-day signed checkout link.

1 Payment details

Buyer sees these details before connecting a wallet.

Payment title

Agent service payment

Amount

\$ 0.001

USDC

Network

Algorand Testnet

Receiving address

U3SN2UCQENDGE3CHKPBMXRSNJ2GFCCHLBT7NUC46VSPEGZDMOIQNCHPQJA

USDC will settle directly to this wallet.

Description

Optional

Payment for the completed agent task.

2 Share with buyer

Only the person with this link can open the checkout.

Link ready

Expires 2026/8/25

Buyer pays

\$0.001

USDC on Algorand Testnet

Payment link

<https://agentpay-firewall.vercel.app/pay?request=eyJ2ZXJzaW9u>

Copy link

Open checkout 

The buyer sees the terms before the wallet opens.

Recipient, amount, network, and expiry are visible and verified against the signed link.

SIGNED TERMS

Changing amount or recipient invalidates the request.

BUYER CUSTODY

Pera Wallet keeps the key and final approval.

MATCH BEFORE SIGN

The live 402 challenge must match the checkout.

Verified seller request

Payment to
Agent service payment
Payment for the completed agent task.

Ready for final review.

A complete seller-to-buyer x402 payment flow, not a protocol mock.

01

Usable product

Seller workspace and buyer checkout are separate, focused flows.

02

Direct integration

@x402/avm + @x402/express + GoPlausible facilitator.

03

Reproducible proof

402 smoke tests, mismatch rejection, and a Lora receipt.
